PYTHON CODING ASSIGNMENT REPORT

Source code:

The website's main function is to allow the user to submit a (.txt) file, after which it will extract the words and numbers and display them as individual lists. We used the Visual Studio IDE and Django framework to write Python code to implement the functionality, as well as HTML and CSS to display it and create a visually appealing interface.

1) Python Source Code:

```
#to deal with HTTP requests and so on
from django.shortcuts import render
#to interact with TextFile model which allows perform database opertions on TextFile
from .models import TextFile
#For using split() and findall() and sub()
import re
'''This method opens a file using its path, a for loop applied on each line in the
file to split the line into individual words and assign them to array words,
then a for loop applied on array words then define a regular expressions using the
findall function which will search for numeric parts within word and
assign it to numericParts array if numericParts is not empty then add all its items
to onlyNumbers array using extend(),
then use sub() function to search and remove the numeric part of the word then store
it in word var, if the word var not empty then add it to onlyWords array
then just return two arrays.
def seperateData(filePath):
   onlyWords = []
   onlyNumbers = []
   with open(filePath) as file:
        for eachLine in file:
            words = eachLine.split()
            for word in words:
                numericParts = re.findall(r'[+-]?\d+(?:\.\d+)?', word)
                if numericParts:
                    onlyNumbers.extend(numericParts)
                    word = re.sub(r'[+-]?\d+(?:\.\d+)?', '', word)
                if word:
                    onlyWords.append(word)
   return onlyWords, onlyNumbers
```

```
{}^{\prime\prime}{}^{\prime\prime} This method receives the value of the HTTP request and then acts based on it. It
also checks the file type and creates the object file using
TextFile model and specify its path and directory after that return the responding
HTML page based on the condition.
def upload file(request):
    if request.method == 'POST' and request.FILES.get('file'):
        file = request.FILES['file']
        if file.content_type == 'text/plain':
            text file = TextFile.objects.create(file=file)
            filePath = text_file.file.path
            onlyWords, onlyNumbers = seperateData(filePath)
            return render(request, 'upload_File/result.html', {'wordsList':
onlyWords, 'numbersList': onlyNumbers})
        else:
            return render(request, 'upload File/error.html', {'errorMessage': 'Only
text files (.txt) are allowed.'})
   return render(request, 'upload File/upload.html')
```

2) HTML:

1. Upload HTML

```
2. <!DOCTYPE html>
3.
4. <html>
5. <head>
      <title>File Upload</title>
6.
7.
       <!--To link CSS with HTML-->
8.
       {% load static %}
9.
     <link rel="stylesheet" href="{% static 'css/styleSheetFile.css' %}">
10.
11.
      </head>
12.
      <body>
13.
          <!--div to control these elements using CSS-->
       <div class="container">
14.
        <div class="text-box">
15.
16.
17.
         {% load static %}
18.
         <img src="{% static 'images/uploadSign.png.png' %}" width="80"</pre>
   height="80" style="display: block; margin-inline-start: auto;">
19.
20.
       <h1>Upload a Text File </h1>
21.
       <br></br>
22. <!--To do opertions like choosing the file and uploading it-->
       <form method="post" enctype="multipart/form-data">
23.
           {% csrf token %}
24.
           <input type="file" name="file" accept=".txt" class="choose-file">
25.
26.
           <br><br><br>>
```

2. Result HTML:

```
<!DOCTYPE html>
<html>
<head>
   <title>File Upload Result</title>
    <!--To link CSS with HTML-->
   {% load static %}
   <link rel="stylesheet" href="{% static 'css/styleSheetFile.css' %}">
<body>
    <!--div to control these elements using CSS-->
   <div claa="container">
       <div class="text-box1 ">
   <h1>File uploaded successfully!</h1>
   <!--To show the list on HTML page-->
   <h2>Words are :</h2>
   <l
       <!--the context provided in python-->
       {% for word in wordsList %}
           {{| word |}}
       {% empty %}
           No words found.
       {% endfor %}
   <h2>Numbers are :</h2>
   <l
       {% for number in numbersList %}
           {{| number | }}
       {% empty %}
           No numbers found.
       {% endfor %}
   </div>
   </div>
</body>
</html>
```

3.Error HTML:

```
<!DOCTYPE html>
<html>
   <title>File Upload Error</title>
    <!--To link CSS with HTML-->
   {% load static %}
   <link rel="stylesheet" href="{% static 'css/styleSheetFile.css' %}">
</head>
<body>
    <!--div to control these elements using CSS-->
   <div class="container">
       <div class="text-box">
           <div class="errorUpload">
           <!--the context provided in python-->
   <h1>Error: {{ errorMessage }}</h1>
</div>
   <br></br>
   <!--To upload another File-->
 <div class=" rechoose">
   <h2>Could you rechoose a Text File</h2>
 </div>
   <br></br>
   <form method="post" enctype="multipart/form-data">
       {% csrf_token %}
       <input type="file" name="file" accept=".txt" class="rechoose-file">
       <input type="submit" value="Upload" class="reupload">
   </form>
   </div>
   </div>
</body>
</html>
```

3) CSS Source Code:

```
/* The main setting for all HTML pages*/
*{
    margin: 0;
    padding: 0;
    font-family: 'Poppins', sans-serif;
    box-sizing: border-box;
    list-style: none;
    /* styling rules for various elements on an HTML page. It sets styles for
    the body, container, text boxes, upload button, and error messages.*/
    body {
    position: relative;
    background: rgb(238,174,202);
    background: radial-gradient(circle, rgba(238,174,202,1) 0%, rgba(148,187,233,1)
100%);
    color: rgb(224, 120, 161);
    .container {
        text-align: center;
        -webkit-text-stroke-width: 1.5px;
        -webkit-text-stroke-color: rgb(159, 73, 108);
        font-size: 32px;
        font-style: normal;
       font-weight: 800;
       line-height: normal;
    .text-box {
        display: inline-block;
        margin: 10px auto;
        padding: 20px;
        border-radius: 30px;
        background: #FEFBFB;
       width: 1050px;
        height: 610px;
    .text-box1{
        display: inline-block;
        margin: 10px auto;
        padding: 20px;
        border-radius: 30px;
        background: #FEFBFB;
       width: 960px;
        height:fit-content;
```

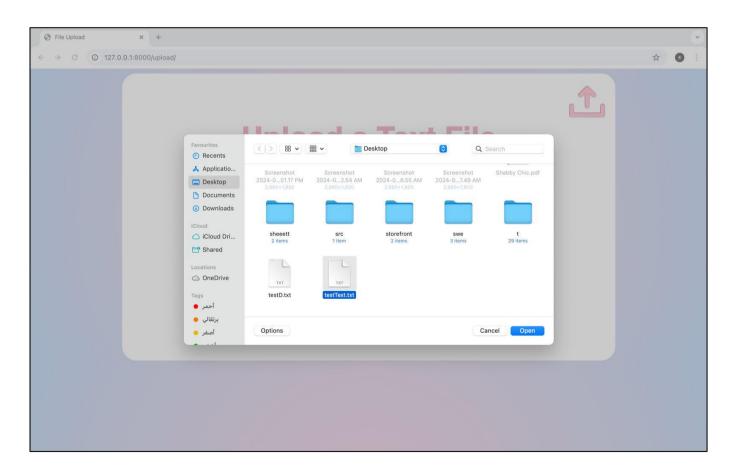

```
.upload-button {
        display: block;
        margin: 10px auto;
